

Nobia

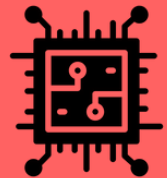

The antiphobia glasses

The pathway to a healthier, fearless life

They seem like standard glasses; however, there is a twist

There's a special lightweight chip inside the frames as well as a camera that projects an image of choice on the lenses

The camera then tracks when you have a phobia in sight and covers your vision of it with your image

If you are in danger at any moment, the glasses will give you a head up that you will need to face your fear for your safety

This will lead to your mental health becoming stronger than ever and building to remove that nasty phobia
