

TRINKT!

THE APP FOR COLLECTORS

PURPOSE

All you have to do is make an account! Then, you can list collectables and buy collectables from others.

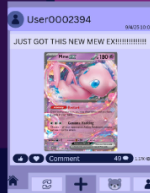

A screenshot of the 'New Collectable' form in the Trinkt! app. The form includes fields for 'Name of Collectable', 'Description', 'Willing to Trade?' (Yes/No), 'Data Collected' (a toggle switch), 'Number Collected?' (a text input), and 'Make Public?' (Yes/No). A 'TRINKT!' button is at the bottom. The app's navigation bar is visible at the bottom of the screen.

WHAT TYPES?

Any types of collectable is allowed! From cards to plushies, everyone can post any collectable (as long as it's appropriate)

Trinkt! allows you to trade collectables with other users. Just list one of your collectables with the price you want and someone else can buy it!

TRADING

SCAM PREVENTION

To combat scams, the two parties split the shipping, you can rate your satisfaction with the other user, and report them if they do not send you the collectable.

Trinkt! will be available on most mobile app stores, such as the Google Play Store and the iPhone App Store.

WHERE TO FIND

The audience is collectors generally, but more specifically aimed towards young adults and teenagers.

I wanted to accomplish a general overview of what Trinkt! Is and a few of the features of it.

I used an informational infographic style to convey what Trinkt! Is.

I tried to keep the color scheme similar to the apps, such as using purples, but I also added more variety so certain elements of the infographic pop out more, like the title. I used a more simplistic style for the infographic because I assumed it would draw attention without being overstimulating.

I laid the elements out in an efficient way; giving a title to the section, then giving a brief description of what that means in the context of Trinkt!
